

ABSTRACT OF THE DISCLOSURE

A plurality of first inclined faces (51) are provided on a side face of a seal ring (5) to be distanced away from each other. The first inclined
5 face (51) opens to an inner circumferential face (23) and the side face of the seal ring (5). A column portion (54) is provided between adjacent first inclined faces (51). Portions at both ends of the first inclined face (51) serve as converging portions
10 (52) that are conical smoothly-inclined faces, each converging to the adjacent column portion (54). On the column portion (54), the second inclined face (57) is formed.
